JULY 4, 2025

VANTERO LLC
600 S 600 E #100
SALT LAKE CITY, UT 84102

Dear Hiring Manager at Vantero LLC:

I am a software engineering student with a passion for solving complex problems. I have experience in web development and object-oriented programming. My greatest strength lies in breaking down complex ideas into simple and understandable solutions. I am ecstatic at the prospect of transforming creative ideas into reality. My background in programming makes me a fantastic fit for roles requiring complex solutions and technical acuity.

I have personally completed many classes in Brigham Young University's software design core, which utilizes Python as its main programming language. These classes have taught me a lot about creating efficient and modular programs. I have also taken a couple web design classes, where I have started to learn JavaScript.

I do not have the greatest familiarity with OpenAI's GPT models, however, I am going to be building more projects this summer that utilize OpenAI, which will allow me to learn more about it. I am excited at the prospect of learning more about integrating AI with applications and programs, so I will be spending time doing so.

In my spare time I love to program as well. I have completed many of my own small games which can be played on itch.io for free. They aren't spectacular, but I created them with the mindset of wanting to grow my programming capabilities. I hope to be able to create games that will benefit people, providing them a new drive to grow. I am very passionate about progress and learning, which is why I would love to work on your team!

Best Regards,

Scott Shumway
